

ResMed

AirFit™ P10... the quieter fit for sleep.

ResMed's new AirFit P10 nasal pillows mask is built on the proven performance, comfort and reliability of the Swift™ FX mask, yet it's 50% quieter¹ and around 50% lighter.² This compact pillows mask is simple to use, has QuickFit™ headgear, and has advanced QuietAir™ woven-mesh venting that is barely audible. Make it your first choice in nasal pillows.

Benefits for you ...

Auto-adjusting headgear

Its QuickFit elastic headgear automatically adjusts to each patient's head. It can be fitted in under 30 seconds.³

Enhanced usability

Having just three parts (frame, cushion, headgear) it's easy to demonstrate and take apart for cleaning.

Encourages ongoing therapy

The AirFit P10 is designed to help users accept and continue therapy, encouraging patient compliance.

Simple sizing and easy pillows differentiation

The AirFit P10 is based on the Swift FX mask platform, so it offers current Swift FX users the same pillows sizing. Plus pillows sizes are color-coded for easy identification.

... and your patients

Instantaneous appeal

With an open-faced design and light weight (1.6 oz) the AirFit P10 delivers a high degree of facial freedom.

Easy therapy acceptance

It's not daunting or claustrophobic to wear, encouraging patients to initially accept and then stick with therapy.

Barely noticeable expelled air

Highly effective air diffusion provides a better user experience for the patient and their partner too.

Ultra quiet mask performance

AirFit P10's innovative QuietAir woven-mesh vent makes it ResMed's quietest mask¹ at a barely audible 21.4 dBA.

* Declared dual numbered noise emission values (with uncertainty 3dBA) in accordance with ISO 4871.

2 ResMed Ref: eLB0798-206 (page 3). Medium sized AirFit P10 mask weighs 1.6 oz (45 g) while Swift FX weighs 3.1 oz (88.7 g).

3 ResMed Clinical Study FECS3 Ref: D629-117 (page 9). 90% of participants fitted the mask comfortably in less than 30 seconds.

4 ResMed Clinical Study FECS3 Ref: D629-117 (page 11). ResMed objective data (pressure, leak, usage, AHI).

ResMed

Comfort with stability.

A recent clinical study⁴ found that more than 70% of patients preferred the new AirFit P10 to the popular Swift FX mask, in terms of both comfort and stability. On average, participants also received 42 minutes more sleep per night using AirFit P10 compared to Swift FX.

The AirFit P10 nasal pillows mask provides a stable seal and a high level of comfort with excellent usability. It also provides patients with a real sense of facial freedom. The mask's innovative QuickFit warp-knitted nylon headgear is unobtrusive yet provides snug two-point head support with minimal facial contact, designed to encourage easy patient acceptance.

Flexible pillows with trampoline action that accommodates movement in a variety of directions while maintaining seal.

Dual-wall nasal pillows seal on contact, disperse air gently to the nose, and offer a wide fit range.

Color-coded sizing with each size featuring a different contrast color for ease of identification: Pink (XS), Clear (S), Gray (M), Blue (L).

Three-part simplicity AirFit P10 has only three parts for fast and easy assembly.

Lightweight integrated flexi-tube stretches and bends to allow for flexibility with stability, so the patient can sleep in a wide variety of positions.

QuietAir woven-mesh venting gently diffuses expelled air so it is barely noticeable by the patient and their partner. The AirFit P10 is ResMed's quietest mask¹ at 21.4 dBA.*

QuickFit auto-adjusting headgear with engineered two-point force and vector control so the elastic gently stabilizes the mask and pulls the pillows into place.
